DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Davidson (US 6,222,122) and further in view of Chapman (US 5,392,510). Davidson discloses a method of forming a sealed module comprising the following steps: (a) providing a housing 16 open at only one end, (b) dispensing a first quantity of potting material 31 into said housing, (c) inserting a circuit board 11 having at least one electronic component 12 thereon into said housing, and (d) applying heat and pressure to the assembly to solidify (cure) the potting material and seal the respective components within the housing. The reference, however, is silent as to the inclusion of an electrical connector. While such a structure is not depicted by Davidson, electrical connectors are commonly included in a majority of circuit board constructions in order to provide an electrical connection with an additional component, as shown for example by Chapman (Column 1, Lines 10-20). As such, one of ordinary skill in the art at the time of the invention would have found it obvious to mechanically and electrically attach an electrical connector to the circuit board of Davidson (structure appears to be consistent with common circuit board construction). Lastly, it is evident from the figures that the

electronic components are not arranged in the adhesive-containing region and thus a "marginal" portion is defined on the circuit board.

Allowable Subject Matter

3. Claims 3 and 4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. While Davidson teaches a method in which a second quantity of potting material 34a is applied, such a method does not involve the arrangement of said potting material "onto an outboard surface of the electrical connector".
